

Information Sheet: Laboratory Diagnostics

Dear patient,

Before your planned laboratory diagnostics, we would like to inform you about the following points.

Taking samples: please make an appointment by phone

For the determination of certain metabolic parameters (blood sugar, blood lipids, cholesterol, thyroid gland) a blood sample must be taken with an empty stomach (no food, only caffeine-free, unsweetened drinks) by 10.00 a.m.

Where: at TRINICUM

Schwarzenbergplatz 6
Eingang Zaunergasse 1-3
1030 Wien
Palais Fanto

You can also come to us with the transfer of another doctor.

Which laboratory tests can be carried out at TRINICUM?

We work with Austrian and German laboratories, so that **almost every analysis** can be carried out at our premises. Few special analyses require acceptance directly in the laboratory.

How long does the blood sampling take?

The blood collection itself takes only a few minutes. You should then take some time and eat something.

Should I make an appointment?

We kindly ask you to make an appointment by telephone at +43 1 907 60 30

How do I get my medical results?

Your results are transmitted directly to your doctor at TRINICUM, who will discuss the results of your findings with you. On request, you can also receive your findings via post or encrypted as an e-mail.

When will I receive my medical results?

Many analyses can be completed and viewed online on the same day.
Special examinations take up to two weeks.

How much does a blood test at Trinicum cost?

A blood collection including handling and transmission of findings costs 30 euros. If the analyses are covered by the Austrian social insurance (list at: <https://www.labor.at/befundabfrage/analysenverzeichnis.xhtml>), no further costs will be incurred. Laboratory tests that are not covered by health insurance must be paid for.
